ders of good quality first received for sale by J. M. LOURNE, no. 15 New Levee-st, may 12

NOTICE.—In consequence of the removal

of Mr. Giequel, he informs the public that his SHOWER-BATH only begun on the 16th inst.—No. 241, Bourbon street, between St. Ann and Dumaine, may 18

RECENT IMPORTATION.

The Hydrocarbon, or Rain Bath. EVERY thing connected with the cleanliness of the body; every thing, which may act as a preventative of disease belongs to the province of hygienic medicine, which Mr. Schneider has lately enriched with the precious discovery of this Hydrocarbon.

The importation into France by Mr. Walz

of the apparatus necessary to the application of this new mode of baths, has obtained for him the approbation of the society of practical medicine, in Paris, to whom he has submitted his process, and which has, from the public's general use of this new apparatus, a just reward for the services which has rendered to humanity.

These baths, the usefulness of which is

generally acknowledged in France, both in a medical and in a domestic point of view, and which, in the present advanced state of the art, are not particularly mentioned, in order to recommend to the public of New Orleans, the apparatus lately imported by Mr. Giequel.

The liquid contained in a reservoir above the

bath, and yielding to its weight pressure according to the laws of hydraulics, is so arranged, that, by a great number of capillary apertures, which project in the form of a water spout on the surface of the whole body, or on one or the other of its parts, according to the direction of the capillary aperture.

Simple or compound, natural or artificial

vapors, detonic, aromatic, tinctures, softening disinfectants, can be alike made use of in the hydrocarbon, and the apparatus may be employed, not only in rain but also in shower baths, with or without a liquid or with steam, as applied to the head, trunk, or limbs of the body.

In practical medicine, the use of this bath,

from the various modes of its application has produced the happiest results; physicians have already obtained signal success in a variety of cases, such as gonorrhoea, glandular affections, contractions of muscles, sturvy, larly dyspepsia, weakness, exhaustion of every sort; rheumatic and cutaneous affections; eruptions of every species, even the worst kind; nervous weakness, and in a number of diseases, in which it is equally necessary to tonify animal economy.

Considered in the light of a powerful hygienic

auxiliary, the use of the hydrocarbon is not only salutary, but produces a healthful vigor, a development of strength, which by no means result from the bath by the immersion process; the perpetual washing of the different parts of the body, by the means of the capillary sprinkling; the excitement produced on the skin, by this constant sprinkling, the general tone and activity, which are the consequences of it; the agreeable sensations, which it creates, the facility of transporting the steam into rain and the latter into the former; each and all of those are qualities of hygiene, too well known, to require further explanation on the subject.

The rain bath differs from the immersion

bath, in this respect, that in the use of the latter, the pressure exercised by the water, frequently produces a very great difficulty of breathing; a tendency of blood to the head, and hence headaches and vertigos.

The bath by aspersion, on the other hand,

produces quite a contrary effect; the water, falling on the whole superficies of the body in small drops more or less tepid, assists perspiration; a gentle titillation is experienced in every part of the body; the process of respiration is regular; it gradually expands, the pulse acquires liveliness without losing its regularity, and if the expression be allowed, the articulations become more vigorous; fir that feeling of weakness, ever attendant on the bath by immersion, is never experienced.

In conclusion the discovery of the hydrocarbon

may be considered as an additional luxury in domestic life, as well as an augment of the pleasurable sensations, which it creates, as the immense advantages of cleanliness, so very salutary to the body.

Baths, with Mr. Walz's apparatus can be

taken warm, cold, or cold; also medicated, unctuous, alkaline, exciting or steam and shower baths, the usefulness of which is very great though generally disregarded on account of the high expenses and infinite care attending the establishment of steam baths at home.

This new apparatus independently of the little

space, which they take up in a room, no ways interferes with the service of a household; and if the more trifling details are taken into consideration, it may be considered as an apparatus, which, in the most modest tenement, in the form of a look case or of a press it may be found an indispensable desideratum in a household.

Initiated into the secret of the process, Mr.

Giequel will take upon himself the setting up of the apparatus after the form and manner, which may be pointed out to him.

The public will be admitted to an inspection

on the 1st of May next, at the establishment of the hydrocarbon bath, Bourbon, between St. Anne and Maine streets, may 23

\$100 REWARD, (no questions asked)

TO whoever returns the writing desk, letters, papers and books contained in the trunk which was stolen from on board the brig Gen. Victoria, on Saturday morning, 14th inst. as those objects are of no value to any one but the owner. Apply to F. R. PERRET, may 19

2000 lbs. beeswax for sale by

april 27 GRAY & DURRIVE.

NOTICE.—In consequence of the removal

of Mr. Giequel, he informs the public that his SHOWER-BATH only begun on the 16th inst.—No. 241, Bourbon street, between St. Ann and Dumaine, may 18
